

Shadow: $R = \frac{\sqrt{27}}{2}r_s \approx 2.6r_s$

Photon Sphere: $r = 1.5r_s$

Event Horizon: $r_s = \frac{2GM}{c^2}$

Singularity

A diagram illustrating the structure of a black hole. It features three concentric circles on a dark gray background. The innermost circle is a solid black disk labeled "Singularity". The middle circle is a yellow outline labeled "Photon Sphere: r = 1.5r_s". The outermost circle is a blue outline labeled "Shadow: R = (sqrt(27)/2)r_s approx 2.6r_s". To the right of the circles, the "Event Horizon: r_s = (2GM)/c^2" is labeled. The entire diagram is bounded by a thin blue horizontal line at the top and bottom.

Shadow: $R = \frac{\sqrt{27}}{2}r_s \approx 2.6r_s$

Photon Sphere: $r = 1.5r_s$

Event Horizon: $r_s = \frac{2GM}{c^2}$

Singularity

The diagram illustrates the structure of a black hole with four concentric regions. At the center is a solid black circle labeled 'Singularity'. Surrounding it is a yellow circle representing the 'Photon Sphere'. The next layer is a light gray annulus representing the 'Event Horizon'. The outermost layer is a dark gray annulus representing the 'Shadow'. The labels for the Photon Sphere, Event Horizon, and Shadow are placed to the right of their respective boundaries. The Singularity label is placed inside the central black circle.

Shadow: $R = \frac{\sqrt{27}}{2}r_s \approx 2.6r_s$

Photon Sphere: $r = 1.5r_s$

Event Horizon: $r_s = \frac{2GM}{c^2}$

Singularity

The diagram illustrates the concentric regions of a black hole. At the center is a black circle labeled 'Singularity'. Surrounding it is a yellow circle representing the 'Photon Sphere'. The next layer is a blue circle representing the 'Event Horizon'. The outermost region is defined by a larger blue circle representing the 'Shadow'. The labels and their corresponding equations are placed to the right of the circles, while the 'Singularity' label is placed inside the black circle.

Излучение Хокинга

Масса черной дыры	Температура излучения	Время полного испарения
Масса Солнца	$6 \cdot 10^{-8} K$	10^{64} лет
$10^{11} M_{\odot}$	$6 \cdot 10^{-19} K$	10^{100} лет
10^3 кг		10^{-9} с
